

Input Description Amfisol system for Tenders

- The mounting system shall be installed without any form of anchoring in the ground. Stability shall be achieved exclusively through ballast. Under no circumstances may the soil or ground surface be penetrated or disturbed deeper than 40cm. The bidder shall provide a complete ballast plan.
- The mounting system shall be capable of accommodating slopes, uneven terrain and any potential ground settlement up to 15° by means of hinged connections.
- The mounting structure shall be entirely made of 100% recyclable materials. The use of non-recyclable materials shall not be permitted, including for the packaging materials.
- The mounting system shall feature a symmetrical back-to-back configuration of the PV modules with an identical tilt angle for both module orientations. The support structure shall be designed to provide a balanced distribution of PV modules across both orientations.
